

RESEARCH INTERESTS

My research interests are the applications of remote sensing and geospatial technologies to study biophysical regulations of carbon, water and energy fluxes, biodiversity, and vegetation dynamics at multiple spatiotemporal scales. My research foci are interdisciplinary in nature and they include landscape/ecosystem ecology, biogeography, grassland ecosystems, agroecology, climate-vegetation interactions, ecological climatology, global environmental change, land cover/land use change, and coupled natural and human (CNH) systems.
